

WARNING AND NOTIFICATION

Electronic Siren ECN 2400-D

SYSTEM

Sound Pressure Level	121 dB (A) / 30 m
Fundamental Frequency	415 Hz / 425 Hz
Alarms (Warning Tones)	9 (customized)
Messages (Pre-recorded Voice)	12 (customized)
Standby Time	up to 7 days
Battery Capacity during 48h without charge	up to 20 minutes activation

SIREN HEAD

Number of Horns / Drivers	16
Weight Siren Head in kg	121
Head Dimension (W x H x D) in mm	300 x 2900 x 850
Windload at 160km/h	2200 N
Material of Horns	Aluminium (Alloy)

SIREN CABINET

Number of Class-D Amplifiers	8
Operating Voltage / Batteries	24 VDC
Mains Power Supply	230 VAC or 110 VAC +/- 10%
Maximum Charging Current	4 A
Solar Power Supply	optional / on request
Local Activation and Control	Foil Keypad with LCD Display
Live PA Announcement	Yes
Remote Activation and Control	Depending Communication Infrastructure
Cabinet Dimensions (W x H x D) in mm	600 x 600 x 350
Cabinet Design	Stainless Steel or Powder Coated
Protection Class	IP66
Weight incl. Batteries in kg	87
Cabinet Ambient Temperature Range	-25 °C... +65 °C

Specifications are subject to change without notice.

SIREN HEAD

Siren head consisting of self-supporting siren horns in modular construction. Single slit diffraction effect leads to 360° omnidirectional sound propagation.

SIREN CABINET

Compact and clearly designed, based on 19" plug-in technology and modular construction. Robust assemblies with long design life guarantee maximum reliability.

Electronic Siren ECN 2400-D

Sound Propagation by the ECN Siren Horn

VERTICAL SOUND PROPAGATION

The ECN siren horn is a specific development with exponential increase of the horn's cross sectional surface, to propagate alarms and messages with high sound intensity.

This special horn design assures optimum propagation of the sound wave within the horn, is widely in use, thoroughly tested and has proven the high perception by the public.

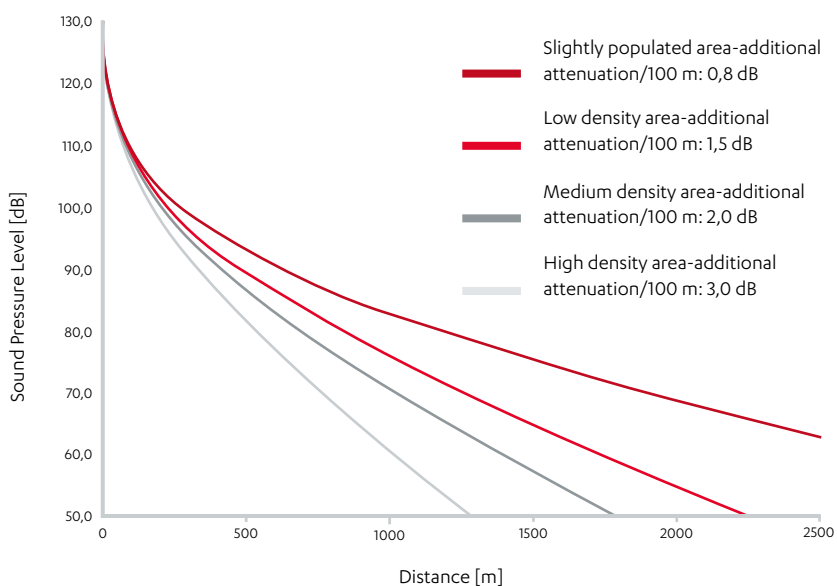

HORIZONTAL SOUND PROPAGATION

The siren horn's omnidirectional propagation of the sound wave in horizontal plane is based on the „Huygens principle“.

This physical guideline explains the diffraction of a sound wave at a single slit. Diffraction of sound results in a circular sound wave of omnidirectional characteristic, which leads to 360° sound propagation.

Propagation of Sound Pressure Level (SPL)
